

Cover letter

Since my young age I was interested in Computers and any topics related to it, at age of 15 I have started to learn C++ along with my friend, with the purpose of creating a game, we did not get past through some graphic libraries and simple asteroid shooters games, we have left an idea of coding, but even though we abandoned the idea, every couple of years I was coming back to it with a hobbyists approach in mind (I never did get beyond the basics, but I did had a lot of fun doing it)

I have decided to take a different approach, and I have started teaching myself to code websites, I have started with a backend as Python seemed to be more appealing to me, then I moved to Flask and Django, along with Flask and Django I have learnt HTML, CSS, and basics of JS.

After a few projects I realized I was missing something, being able to dynamically interact with my websites, this is where I have started to put more focus on JS and React, and which I am doing to the present

During all this time I came to realizations that coding is much more than just knowing the language and its syntax, it is very important to think in a 'coding' way while approaching the problems, keeping your code clean, commented and as self-explanatory as possible, to this day I am teaching myself that while fighting with an urge to go the short way. When stumbling onto a problem that I could not get past with my knowledge at the time, whenever googling a problem and finding a 'hack' solution to it, I kept looking until I found the right approach

With all the above I hope you will consider my application, even though I still need to learn many things I think I would be a valuable member to the team, I am eager to expand my knowledge and learn new things, if you have any questions do not hesitate to ask me.

If you think this is not sufficient for this role, I would really appreciate to give me some feedback on what you think I would need to improve for this role, thank you.

With best regards

Damian Kuchta
